

Suggested question:

HC001_Q1: Which type of heating system do you mainly use?

1. District heating network/teleheating (thermal energy supplied to the dwelling through a heating network by pipes from a place other than the building in which the dwelling is located)
2. Central heating system (common heating system for the whole housing unit or for a building or a co-property serving several dwellings e.g. apartments in a block of flats)
3. Individual heating system (wood or gas stoves in each room, fixed electric radiators in each room, individual boilers, etc.)
4. Non-fixed heating (e.g. portable heaters such as an electric radiator or a fan heater which can be moved from one room to another)
5. No heating at all
