

Descriptive report of DB040

Description

Short Description: Region of residence

Long Description: The variable indicates the region within the country of residence in which the usual residence of the household is located at the date of interview. From 2021 onwards, it classifies regions into three types of area based on population density: 'Cities', 'Towns and suburbs', and 'Rural areas'. This classification uses geographical contiguity and minimum population threshold applied to 1 km2 grid cells, largely based on the NUTS classification.
