

Description of flags

This income source uses two-digit flags. The first digit of the flag collects information for 'most common source or method' used, the second digit of the flag collects information for the 'type of collected value' and the third digit is not used for this income.

The modalities used for the first digit are the same as other income variables while for the type of collected values have only two modalities '1-Net of tax on income at source and social contributions' and '9- Not applicable (the value was not collected)'.

For HY100G, HY100N, and also for variables as HY120G, HY120N and HY145N, the only acceptable modality for the type of collected value is "1 – net of tax on income at source and social contributions" (or "9 – Not applicable (the value was not collected)" if that is the case).

The imputation factor shows what percentage of a recorded (transmitted) value is collected and what percentage is imputed. The value should be recorded with two decimal places. Negative values are allowed.
